Monitor Assembly & Installation Guide

AOC Monitors

Monitor Assembly & Installation Guide (I)

This monitor is fragile and may break even with a small external force. Please follow this assembly and installation guide carefully to prevent damage. **Free repair service is not available if the monitor is damaged due to improper installation.**

Before opening the package, please check for any damage to the packing box. If the box is damaged or there is any trace of any external force, please keep the box* and protective cushioning foam for verification of the cause(s).

*** Please store the monitor box and cushioning foam for service verification later.**

Precautions to prevent panel from breaking

Avoid direct contact between your new monitor and your supporting surface (it is also not advisable to assemble on a soft surface, such as a bed)

***Remarks for MMD team :** we have many customers who actually broke the panel while assembling on bed or fluffy duvet.

Do not press the rear side of the panel surface.

When assembling on a desk, be careful to avoid contact between the panel and the corner of your desk, chair or furniture.

How to install

① Lay the carton flat with the **FRONT** marking facing downwards, and then open it.

[**FRONT** marking facing downwards (○)] [Do not open box in an upright position (X)]

② Hold the binding strap and pull out the device horizontally.

*** If there is no binding strap, hold both sides of protective cushioning foam, and pull out carefully.**

Monitor Assembly & Installation Guide (II)

③ Remove the upper part of protective cushioning foam.

④-1 (Curved monitor)
Assemble stand first and assemble stand and base while keeping the monitor device in the protective cushioning foam.

④-2 (Flat monitor)
Remove protective cushioning foam, then carefully remove monitor still in its protective bag. Place the monitor with its panel surface facing upwards to assemble stand and base.

⑤ Stand monitor up carefully.

*** Curved monitor:** remove protective cushioning foam after standing up the monitor.

*** NB: if you pull your curved monitor out by taking the stand from its laid-down position, there is risk of impact to the top side of the panel, and it may break.**

[Remove cushioning foam after standing monitor up (○)]

[Do NOT take monitor out of packaging by pulling stand (X)]

⑥ When moving the monitor, do not grab the panel, but instead hold the bottom side of the monitor.

*** If you grab the sides of the monitor or the panel directly, then the panel may break.**

[Hold monitor along its bottom side (○)]

[Do NOT grab or press panel (X)]

⑦ When connecting cables, face the rear side of the machine and grasp the stand while inserting cable(s).

*** Do NOT grasp the panel or lay down the monitor to insert the cables.**

[Hold the rear stand to connect cable (○)]

[Do NOT lay monitor down, nor press on panel (X)]
